

Bone mesh fixation for the treatment of suprailiac hernia. Report of two cases

Abstract

Hernias of the lateral abdominal wall are a rare entity. In most cases, they occur after surgery or trauma. We present two cases of lumbar hernia: the first one after iliac bone grafting and the second one after muscular tearing by the seatbelt during a car accident. Both cases were successfully repaired using a propylene mesh with bone fixation.

Keywords: Bone injert; Cresta ilíaca; Eventración lumbar; Hernia incisional; Iliac bone; Incisional hernia; Injerto óseo; Lumbar hernia.
